**Amerikal Responds to Growing Demand for  
Genesis Pressroom Chemistry**  
*Facility Increases Manufacturing Capabilities*

**WAUKEGAN, Ill.** (May 4, 2007)...To meet the growing demand for Genesis® pressroom chemistry, Amerikal Products Corporation recently completed significant enhancements to its manufacturing facility.

“We are simply responding to the demands of the marketplace,” said Robert Danielson, Jr., vice president, business development and sales. “Since introducing the fifth generation of Genesis pressroom chemistry, we’ve experienced substantial growth, making this expansion necessary. Our facility is now capable of manufacturing approximately 18,000 gallons of Genesis pressroom chemistry per 12-hour shift.”

Manufacturing enhancements include the addition of three state-of-the-art stainless steel blending stations, equipped with variable speed and computerized controlled blending systems. New quality control capabilities were also put into place to ensure the highest level of consistency and quality is maintained while manufacturing all Genesis chemistry.

All improvements and enhancements were custom designed to adhere to Amerikal’s environmental standards. The goal of the renovation was to increase overall productivity and output while maintaining one of the world’s cleanest, safest and most sustainable pressroom chemical manufacturing facilities.

“We’ve always been committed to providing customers with the highest quality and most effective pressroom chemistry,” said Danielson. “It’s imperative that our facility reflects this commitment as our customers provide printing and packaging services to food, pharmaceutical, cosmetic and medical industries. This investment exemplifies our continued commitment to providing customers with state-of-the-art technology and products.”

Based in Waukegan, Ill., Amerikal Products Corporation, through its Genesis division is the recognized leader of environmentally responsible pressroom chemicals. Founded in 1989, Amerikal is committed to improving customer’s productivity and profitability by developing products and equipment designed to preserve natural resources by reducing consumable usage, waste streams and energy costs while maintaining a safe and productive environment.
