

Water Pan Insulation System

Key Benefits

*Eliminates Condensate
Print Contamination*

Surface Prepped

Chemically Primed

*Hand Fitted
Dense Insulation*

*Outer Chemical
Resistant Shell Coating*

Before

After

**Chemical Resistant
Flexible Shell**

**Cleanable
Durable
Odorless
Long Lasting**

Edge Sealant

**Exceptional by Design,
Quality & Simplicity**

Water Pan Insulation System

Medical, Pharmaceutical, Food, Cosmetic label and package printing dictates that press water pans must be insulated to reduce print condensate contamination. This is an important dictate in package print manufacturing.

Amerikal's pan insulation system eliminates condensate contamination at the extreme dew point of 45° f. pan water temperature surrounded by a 95% RH pressroom environment. When you ship Amerikal your pans, they are cleaned, surface prepped, chemically primed and hand fit with a special dense insulation material. If Amerikal stopped there you would have a professional insulation job better than anything the press manufacturer could do or has done. Due to the fact that all insulation material will absorb and retain chemical wash up, ink, and paper debris contaminates, Amerikal adds a chemical resistant flexible shell and edge sealant. The combination insures long life, cleanable, durable, and odorless water pans that will not contaminate the printed material.

Amerikal's business is to innovate. We build and supply our United States manufactured equipment, chemistry, provide facility engineering, best practice print training, and on-going research to the print packaging industry.

Since our inception Amerikal has provided safe, sustainable, and energy efficient products.
